

# Harmo-Energy-Ring

The Harmo-Energy-Ring makes a wonderful gift. It is the result of decades of research done by an experienced user of the pendulum and dowsing specialist. It took him many years of research to find the right materials from our earth and to figure out the exact proportions in how to bring them together.

Besides Aluminum as a main carrier element, the ring consists of tiny amounts of the following elements (confirmed by EMPA\*):

Aluminum (Al)	Beryllium (Be)	Chromium (Cr)	Magnesium (Mg)	Phosphorus (P)	Titanium (Ti)
Antimony (Sb)	Boron (B)	Iron (Fe)	Manganese (Mn)	Silver (Ag)	Zinc (Zn)
Lead (Pb)	Cadmium (Cd)	Kopper (Cu)	Nickel (Ni)	Silicon (Si)	Tin (Sn)
Bismuth (Bi)	Calcium (Ca)	Cobalt (Co)	Sodium (Na)	Strontium (Sr)	

70'000 Bovis units have been measured for the ring (the water of Lourdes shows 25'000 Bovis units). The ring is available in 4 sizes: 8.4cm (Max), 4.2cm, 2.0cm, 1.8cm and 1.6cm.
